

Text to Speech

WHAT ARE THE LAPs?

The LEARNING ASSESSMENT PROGRAMS (LAPs) were developed as a result of extensive workplace-readiness research, which points out that employers throughout the country need to have workers who have the ability to handle simple math, communications, problem solving, and science skills related to their jobs.

The LAPs provide academic/basic skills assessments focused on the workplace. They target key competencies necessary for successful performance in each career area. Each LAP demonstrates real world applications of academic/basic skills. There are three LAPs per career area. There are from ten to fifteen different job-specific activities in a career area. Each activity takes approximately 30 minutes to complete. It takes approximately 4-7 hours to complete the entire LAP, allowing users to experience some entry-level, mid-level, and advanced-level job activities within a career area. The multimedia technology makes for a user-friendly program with a comprehensive management system that stores, tracks, and retrieves each user's information. Use the LAPs to create a prescription for learning that targets key competencies necessary for success in an occupational area. The LAPs integrate academic and technical skills in a way that no other system can. Results can be used for planning skill-enhancement activities and for transition and Individualized Educational Plans (IEPs). Results also correlate to many standards and proficiency tests and most skill-enhancement systems.
